

AVAILON

Patch Test Semi Permanent Make-up

The pigment and anaesthetic will be placed on a plaster. Each plaster will be placed in either of the following areas:

- Behind each ear
- On top of the arm
- On the lower back

After 24hours remove the plaster and after 48 hours examine the skin. If there is no reaction, i.e. no redness, swelling, irritation or itching, then it is safe to proceed with the treatment. Should you experience any of the symptoms mentioned above, remove the plaster and immediately flush the area with cold water.

Please telephone the salon to report the test results and to arrange an appointment.

The correct colour will be mixed for you at your first treatment. The colour is for patch test purposes only.
